

The new Screen Brush

The Optimized Sieving Aid for Your Tumbler Screening Machines

More Power in the Screening Process - Advantages at a Glance

New Design

- a robust and durable brush body
- brush body made of a single casting and without any mechanical connecting elements
- supports a constant optimal sieving performance
- suitable for food products

Efficient Cleaning

- improved radial brush movement that covers every area of the screen deck
- large one-piece brush body and optimized sliding action
- lays entirely leveled and solid on the screen deck
- more bristle elements that are optimally arranged

Food Conformity

- EC 1935/2004, EC 2023/2006, VO/EU 10/2011
- FDA Title 21, part 177. ff "Code of Federal Regulations, Food and Drugs, Indirect Food Additives: Polymers"

Characteristics

- eliminates product adhesion on the screen cloth
- prevents agglomerate formations
- optimal screening results and a more efficient screening process

As the inventor of the tumbler screening machine in 1957,
our service is based on years of experience

We ensure continuous machine availability and long-term operation of your screening machines with our know-how.

In order to ensure years of use of your machines and systems under tough conditions, preventive maintenance is required. Achieve this with our individual maintenance and servicing packages.

- Individual service and maintenance packages
- 24-hour delivery service for standard spare parts
- Customer-oriented service planning
- Ready availability of our service technicians, also on weekends

- Protect your machines from malfunctions and increase the service life
- The scope and intervals are determined by you
- Service and maintenance packages as needed
